Education

VIT Bhopal University

Bachelor of Technology, Computer Science & Engineering (AI & ML) | CGPA: **8.03/10.0**

Sept 2023 – May 2027

Bhopal, India

Montfort Inter College

Class 10 & 12 (Higher Secondary)

Completed 2023

Lucknow, India

Technical Skills

Languages: Python, JavaScript, C++, Java

Web & Backend: HTML5, CSS3, React.js, Vite, Node.js, Express.js, REST APIs, JSON

Databases & Tools: PostgreSQL (via Supabase), MongoDB, SQL, Docker, Git

AI, ML & Automation: LLMs, RAG, Vector Embeddings, LangChain, Prompt Engineering, AI Agent Workflows, TensorFlow, Scikit-learn

Practices: API Design, Debugging & Testing, CI/CD (Render), Version Control

Soft Skills: Problem Solving, Critical Thinking, Ownership, Research, Technical Presentation

Work Experience

Future Smart AI

Remote

Content Research Intern | [Link](#)

Sept 2025 – Feb 2026

- Reviewed and tested more than **1,000 AI tools** across video generation, image generation, captioning, and content creation, judging each one on how well it actually worked rather than its marketing claims.
- Published clear comparisons of the tools – what worked, what didn't, and which was best for each use case – helping product and content teams choose faster.

Projects

Interview IQ | [Live Demo](#) | [GitHub](#)

July 2025 – Aug 2025

- Built a full-stack AI interview-prep platform using **React.js**, letting users upload their own study material and get answers, summaries, and practice questions generated from that content instead of generic AI knowledge.
- Used **LangChain** and a **vector database** to build a **Retrieval-Augmented Generation** system, so the AI searches the user's own documents for the right information before answering, with **Supabase** and **PostgreSQL** handling logins and saved sessions.
- Integrated **VAPI** for real-time, voice-based mock interviews, letting users practice speaking their answers to an AI interviewer, plus a resume gap analyzer to flag what to work on next.

AI-EchOo E-Commerce Platform | [Live Demo](#) | [GitHub](#)

Feb 2026

- Built a full-stack e-commerce platform using **React.js**, **Supabase**, and **PostgreSQL**, with product listings, search, cart, wishlist, checkout, and order tracking, plus an admin dashboard to manage products, users, and orders.
- Built a shopping assistant powered by **Groq** that uses **Retrieval-Augmented Generation** to answer questions from the store's real product data, so it recommends and compares products that actually exist.
- Designed and managed the **PostgreSQL** database behind the platform – products, orders, carts, and payments – and fixed real data-syncing issues between the website and the database.

Desktop AI Voice Assistant | [Live Demo](#) | [GitHub](#)

May 2025

- Built a Python-based **AI agent** that listens to voice or text commands and automatically does the right thing – opening apps, searching the web, playing YouTube videos, or generating content and images.
- Integrated **Groq** and **Google Generative AI** for natural conversational responses, added speech-to-text and text-to-speech, and built the interface using **PyQt5**.
- Implemented browser automation so the assistant can complete tasks directly, like searching LinkedIn or looking things up on Chrome, instead of just explaining the steps.

Achievements

Hackathon Winner – 1st among **100+ participants** at AI Demos Monthly Hackathon for an innovative AI solution. ([Link](#))

Published a **Carbon Credits Dataset** on Mendeley Data for carbon credit prediction research. ([Dataset](#) | [Predictor](#))

Certifications

- Microsoft Azure Fundamentals (AZ-900)** – Cloud computing, Azure services, security ([Certificate](#))
- Applied Machine Learning in Python** – University of Michigan, Coursera ([Certificate](#))
- NPTEL Cloud Computing** – IIT Kharagpur ([Certificate](#))
- Face Prep MERN Stack** – MongoDB, Express.js, React.js, Node.js ([Certificate](#))
